

Protect customer and corporate data with AlertBoot managed disk encryption software

AlertBoot is a web-based suite of data security tools for individuals and organizations that need cost-effective, scalable disk encryption and data security. AlertBoot software prevents unauthorized access to mobile and stationary endpoint devices by encrypting fixed and external hard disks and removable media. If a device falls into the wrong hands, the data is unreadable even if the hard disk is removed.

Industry-leading data encryption technology

AlertBoot encrypts all physical disks on laptops and desktops using proven encryption algorithms revolutionized by the SafeGuard Enterprise Security Engine from Sophos.

Secure user authentication and authorization

Centrally defined and enforced password rules and Power-On Authentication prevents password penetration attacks.

SecureAuth: an added layer of authorization

SecureAuth from MultiFactor Corp. uses encrypted X509 Client certs to prevent phishing, DNS, and man-in-the-middle attacks without the IT headaches that come with other certificate-based solutions.

Centralized security management and IT tools

AlertBoot client applications can be managed over TCP/IP. All users, machines, files, recovery keys, and other functions can be administered remotely.

Company-wide password policy enforcement

Administrators can set customizable password strength requirements, and AlertBoot can ensure that everyone's endpoint PC complies with the password strength policy.

Enterprise-grade auditing and reporting

Centrally managed audit logs and customizable reporting ensure compliance with internal policies and external regulations.

Advanced content encryption for files and USB keys

Optional Advanced Content Encryption lets you protect files and portable USB keys—so they stay encrypted regardless of where they go.

System Requirements

Operating systems

- Microsoft Windows 2000 (Service Pack 4)
- Microsoft Windows XP (Service Pack 3)
- Microsoft Windows Vista™ (Service Pack 1)
- Microsoft Windows 7

Support for data recovery, imaging and forensics

- Lenovo® Rescue & Recovery—secure recovery of encrypted operating systems and data
- Windows PE 2.0 (recovery operating system)
- Ready for Encase (Guidance Software), AccessData, and Kroll Ontrack

Key Features

Powerful, transparent encryption

- Full hard disk encryption (e.g., NTFS, FAT)
- Multi-platform removable media encryption
- Internationally recognized encryption algorithms
- Secure, encrypted hibernation
- Automatic encryption of all removable USB media

Pre-boot user authentication

- Power-On Authentication via password
- Centrally defined, enforced password rules
- Log-on process prevents password penetration attacks

Greater productivity and ease of use

- Single sign-on to the operating system
- No performance degradation with high-speed encryption/decryption algorithms
- Transparent background encryption ensures no work interruptions
- Secure password recovery over phone or web, including web self-help

Powerful central administration

- Centrally enforced encryption rules
- Easy, centrally managed installation
- Transparent roll-out over a vast network—reduce the burden on your IT staff

Audit logging and reporting

- All client activities/status and security events are logged and stored locally and centrally
- Types of logs and storage locations are user-defined
- Administrators can filter, view, and print log reports

AlertBoot 24/7/365 live support

- Personal helpdesk for password recovery and assistance
- Secure and confidential; users are challenged with questions to verify identity.
- AlertBoot Support will never have access to users' devices or personal data.

About AlertBoot, Inc.

Based in Las Vegas, NV, AlertBoot has a proven track record of delivering comprehensive, customizable disk encryption software applications as fully managed services for companies of all sizes. AlertBoot has more than ten years experience in developing and implementing Point of Sale (POS) and Customer Relationship Management (CRM) applications. AlertBoot's team is here to support the comprehensive, centrally managed AlertBoot endpoint security solution.
